Quarterly report

31 March 2026

This is a marketing communication. This document is directed at professional investors and should not be distributed to, or relied upon by retail investors. This document is designed for use by, and is directed only at persons resident in the UK. The value of investments, and the income from them, may fall or rise and investors may get back less than they invested.

# Market commentary

Vanguard LifeStrategy® Global 60% Equity Fund

As at 31 March 2026

## Highlights

- 1** Global tensions weighed on growth expectations.
- 2** Inflation pressures increased slightly.
- 3** Major central banks adopted a more cautious tone on potential rate cuts.

2026 started with rising geopolitical tensions, shifting trade policy and growing unease about AI's impact on businesses. Global economic activity remained weak as uncertainty weighed on growth. Inflation continued to ease in the UK and the US, although the inflationary effects of the Middle East conflict had yet to appear in official data during the period. Consequently, central banks adopted a cautious tone, with the European Central Bank (ECB), the Bank of England (BoE) and the US Federal Reserve (Fed) all signalling a wait-and-see approach at their March meetings.

In the UK, economic growth remained subdued, expanding by 0.1% in Q4 2025, matching Q3's weak pace, as services activity stagnated. The labour market remained subdued with the unemployment rate remaining at 5.2% in January. Headline inflation eased, with the headline Consumer Price Index (CPI) falling to 3.0% in February, while core CPI (excluding food and energy prices) held at 3.2%. Despite weak growth and falling inflation in the UK, the BoE held

rates at 3.75% and adopted a more hawkish tone amid concerns that Middle East tensions could reignite inflation.

In the euro area, economic growth slowed to 0.2% in Q4, slightly below expectations of 0.3%. Meanwhile, euro area inflation picked up to 2.5% in March, driven mainly by higher energy prices, while underlying pressures eased, with core inflation dropping to 2.3%. The ECB left rates unchanged at 2.0% and signalled caution on future cuts.

US growth slowed sharply to 0.2% in Q4, which was down from 1.1% in Q3, as the government shutdown hurt economic activity. February's unemployment held steady at 4.4% in February, while US inflation, as measured by the core PCE Price Index, rose slightly to 3.1% in January, reflecting persistent price pressures. The Fed kept rates unchanged in March as it balanced slowing growth against stubborn inflation.

# Fund commentary

Vanguard LifeStrategy® Global 60% Equity Fund

As at 31 March 2026

## Highlights

- |  |  |  |
|--|--|--|
| <b>1</b><br>Global equity markets were mixed, with the UK and Japan outperforming. | <b>2</b><br>Central banks adopted a more cautious tone on rate cuts. | <b>3</b><br>Fixed income weakened as inflation risk intensified. |
|--|--|--|

Global equity markets were mixed over the quarter. US equities posted negative returns, underperforming most other major stock markets. Higher oil prices and concerns about AI's impact on traditional business models weighed on sentiment. Europe equities (ex UK) also recorded weak performance amid ongoing geopolitical risks. By contrast, Japan equities posted healthy gains, driven by expectations of political stability and pro-growth policies, despite some pullback in March from Middle East tensions. UK equities also delivered positive returns, supported by relatively high exposure to commodity linked sectors, particularly energy. Overall, emerging market equities were broadly flat in local currency terms but generated a modest gain in sterling terms. Within the region, Korea and Taiwan gained on robust AI related demand, while China and India lagged as higher oil prices weighed on their energy-dependent economies.

Fixed income markets sold off in Q1. Government bonds came under pressure on increased uncertainty around the future path of interest rates, given concerns that surging energy prices will reignite inflation. UK index linked gilts were the exception, posting positive returns. US Treasuries also proved relatively resilient, delivering broadly flat returns and

outperforming most other major bond markets. By contrast, UK government bonds delivered the weakest returns among major government bond markets, as expectations for Bank of England rate cuts were scaled back following its more hawkish tone. Euro area government bonds were also weaker after the European Central Bank kept policy rates unchanged, while Japan government bonds sold off amid expectations of higher government spending and the Bank of Japan signalling rising inflation pressures. Elsewhere, non-government bond sectors lagged.

Regulations require a full 12-month track record before we can show performance. Performance will be shown after 22 January 2027.

# Fund factsheet

## Vanguard LifeStrategy® Global 60% Equity Fund

As at 31 March 2026

Total fund assets: £72.6mn

### Investment objective and policy highlights

- The Fund seeks to provide a return on your investment (through an increase in the value of, and income received from, assets held by the Fund) within a pre-defined asset allocation over the long term (5 years or more).
- The Fund seeks to achieve its investment objective by investing at least 90% of its assets in a diversified portfolio of passive funds that seek to track the performance of an index.
- The pre-defined asset allocation will mean the Fund can invest in passive funds that, in turn, invest in either shares of companies or government and corporate bonds globally.

### Key investment risks

The value of equities and bonds can be affected by factors such as stock market movements, interest rates, credit spreads and volatility. Other driving factors include political, economic news, company earnings and significant corporate events. Movements in currency exchange rates can adversely affect the return of your investment.

**Counterparty risk.** The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

**Liquidity risk.** Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily. This

could cause the Fund to incur higher costs when buying or selling investments or could mean that the Fund is not able to buy or sell investments when it would like to do so.

**Credit risk.** The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.

**Inflation risk.** The value of your investments may not be worth as much in the future due to changes in purchasing power resulting from inflation.

**Use of derivatives.** The use of derivatives could increase or reduce exposure to underlying assets and result in greater fluctuations of the Fund's net asset value.

## Investment risk information

The value of investments, and the income from them, may fall or rise and investors may get back less than they invested.

Past performance is not a reliable indicator of future results.

Some funds invest in emerging markets which can be more volatile than more established markets. As a result the value of your investment may rise or fall.

Investments in smaller companies may be more volatile than investments in well-established blue chip companies.

The Vanguard LifeStrategy® Global Funds may invest in Exchange Traded Fund (ETF) shares.

ETF shares can be bought or sold only through a broker. Investing in ETFs entails stockbroker commission and a bid-offer spread which should be considered fully before investing.

Funds investing in fixed interest securities carry the risk of default on repayment and erosion of the capital value of your investment and the level of income may fluctuate. Movements in interest rates are likely to affect the capital value of fixed interest securities. Corporate bonds may provide higher yields but as such may carry greater credit risk increasing the risk of default on repayment and erosion of the capital value of your investment. The level of income may fluctuate and movements in interest rates are likely to affect the capital value of bonds.

The Funds may use derivatives in order to reduce risk or cost and/or generate extra income or growth. The use of derivatives could increase or reduce exposure to underlying assets and result in greater fluctuations of the Fund's net asset value. A derivative is a financial contract whose value is based on the value of a financial asset (such as a share, bond, or currency) or a market index.

For further information on risks please see the "Risk Factors" section of the prospectus on our website at <https://global.vanguard.com>.

## Important information
