

Vanguard LifeStrategy MPS Global

Quarterly Newsletter

30 September 2024

This quarterly newsletter is designed to give Vanguard LifeStrategy investors an insight into how the model portfolios are performing and what's been happening in the global economy and financial markets.

Economic background

In the third quarter of 2024, economic growth slowed in the United States, United Kingdom, euro area and China. Inflation continued to fall broadly but remained above target levels in the UK and US. The European Central Bank (ECB), Bank of England (BoE) and US Federal Reserve (Fed) all cut their main policy interest rates.

In the UK, economic activity data suggest that momentum continued to slow in the third quarter after strong growth in the first half of 2024¹. Wage growth fell to 5.1% in July after having reached a high of 6.0% in April and the unemployment rate fell to 4.1% by the end of July, compared with 4.4% in April. Annual core inflation², which excludes the volatile energy and food components, edged up from 3.5% at the end of the second quarter to 3.6% in July. Services inflation remained well above target levels at 5.6% in August. The BoE cut its Bank Rate from 5.25% to 5.0% at its August meeting and held this rate at the subsequent September meeting.

Activity indicators suggest the euro area economy slowed in the third quarter. The unemployment rate dropped slightly to 6.4% in July from the 6.5% recorded in June, while job vacancies also fell. However, survey data points to weakness in the labour market ahead, particularly in Germany. Annual headline inflation fell below the ECB's 2.0% target for the first time since June 2021 but annual core inflation was 2.7% in September, while services inflation, which only includes service sectors such as hospitality and education, remained elevated at 4.0%. The ECB cut its Deposit Facility Rate by 0.25 percentage points for the second time this year, leaving it at 3.5% in September.

The US economy grew in the second quarter at an annualised growth rate of 3.0%, up from 1.4% in the first quarter. Surveys of economic activity suggest a cooling in momentum in the third quarter. The unemployment rate rose to 4.2% in August from 4.0% in May while job vacancies declined. Annual headline inflation fell in the third quarter but services inflation remained elevated. The Fed cut its federal funds rate for the first time in four years in September, reducing its key interest rate by 0.5 percentage points to a range of 4.75%-5.00%.

In China, economic growth slowed to 0.7% in the second quarter of 2024 compared with 1.5% in the previous quarter. Surveys of economic activity suggest the slowdown may continue in the third quarter. Headline and core inflation remained low, growing at an annual pace of 0.6% and 0.3% in August respectively, amid lacklustre demand. The People's Bank of China loosened monetary policy in the third quarter of 2024, cutting short-term lending rates.

¹ Source: Composite Purchasing Managers' Index (PMI) for July and August 2024.

² Core inflation as measured by the Consumer Prices Index (CPI).

The performance of the portfolios is driven by the performance of their respective holdings of shares (equities) and bonds (fixed income). Equities represent a stake in the ownership of companies. Bonds represent a promise by a government or company to pay a certain amount of interest over a given period, and to repay the sum borrowed at the end of the period.

LifeStrategy Global Q3 Commentary

The LifeStrategy Global model portfolios delivered positive returns in the third quarter (Q3) of 2024, extending the run of positive performance to four consecutive quarters.

The portfolios with a higher allocation to fixed income markets outperformed those with lower fixed income weightings. Returns ranged from 0.31% for the 100% Equity portfolio to 3.37% for the 20% Equity (80% fixed income) portfolio¹.

The positive performance of the LifeStrategy Global model portfolios was driven mainly by their exposure to global investment-grade debt, which benefitted from a combination of narrowing credit spreads and central banks cutting policy interest rates. In fixed income, UK bonds contributed the least to returns.

Within equities, returns were modest with emerging market and Pacific ex-Japan stocks the largest contributors to portfolio returns. As sterling strengthened over the quarter, this detracted from overseas equity returns. Fixed income investments were largely shielded from currency effects during the quarter, owing to the hedging of the portfolios' non-sterling denominated fixed income exposures.

Equity markets across Asia-Pacific rallied towards the end of September after The People's Bank of China announced significant economic stimulus measures to tackle persistently weak economic growth. The main beneficiaries of the support measures included companies in cyclical sectors. Stocks contributing the most to performance were Hong Kong insurance corporation AIA Group, Commonwealth Bank of Australia and Chinese firms such as online retailer Alibaba Group and multimedia group Tencent Holdings. Conversely, Japan equities detracted from performance across the range, despite the Nikkei 225 Index reaching a new high in July, as it sold off sharply in reaction to the Bank of Japan's interest-rate hike.

Outlook

Our economic view suggests that the fight against inflation isn't over and that policymakers will continue to use interest rates to rein in price growth. While rates are widely expected to come down globally over the next 12 months, we don't see rates coming back to zero and expect policy rates to settle at a higher level than we saw in the previous decade.

This 'higher-for-longer' interest-rate outlook is a positive development for long-term bond investors. Initial yield is a key driver of long-term fixed income returns and supports our outlook for high-but-moderating returns on developed-market government debt.

The next decade for equity market returns is unlikely to mirror the previous one, particularly for the US. We expect stock market returns across regions to be similar, supporting the case for a globally diversified portfolio.

Nevertheless, our 10-year outlook for multi-asset portfolios has improved compared with only a few years ago. This is thanks, in part, to higher bond market return expectations, which are due to higher long-term yields. Having a mix of assets across global equities and bonds can help smooth returns over time, with the better-performing investments helping to offset those that perform less well.

Key takeaway

What should investors do in response to these developments?

Many investors change their portfolios in a bid to take advantage of the latest news. However, it's very difficult to time these changes effectively. In practice, shifting your portfolio in response to short-term events may lead to little more than increased trading costs.

At Vanguard, we believe that investors will usually be better served by identifying the appropriate asset allocation to suit their goals, then sticking with it and tuning out short-term noise. By regularly rebalancing back to target weights, the LifeStrategy Model Portfolios are built to reflect this belief. See the back page for more on Vanguard's principles for investing success.

Model Portfolios performance (net of all-in costs)

LifeStrategy Global

Cumulative % Growth, GBP, since inception* to 30 September 2024

* Inception date: 30 May 2022.

All-in costs

All-in costs include Ongoing Charges Figures (OCFs) and an annual portfolio management fee that covers the discretionary management of the managed portfolio service, ongoing oversight and regular rebalancing of the portfolios. The portfolio management fee is exclusive of VAT and any adviser, platform or dealing charges.

Each share class of a fund has an Ongoing Charges Figure which is based on projected expenses for a given period. We review these projections regularly to make sure they are appropriate. The OCF covers administration, audit, depositary, legal, registration and regulatory expenses incurred in respect of the funds. The funds' Authorised Corporate Director will usually pay those fees out of its periodic annual management charge (AMC), which means that the OCF will normally equal the AMC. There may, however, be certain extraordinary expenses which cause the OCF to exceed the AMC.

The OCF does not include portfolio transaction costs incurred by a fund or the cost of subscribing for, or redeeming, shares or units in a fund. For a full disclosure of all costs and charges, please visit our website: global.vanguard.com/portal/site/portal/ucits-mifidprii

Please see individual model portfolio performance tables for further information.

Past performance is not a reliable indicator of future results.

Vanguard's principles for investing success

It's easy to be swayed by the latest developments in the markets or the economy, manager ratings or the performance of an individual security or strategy. However, instead of getting caught up in investment noise, we believe that investors stand a better chance of success if they remain focused on the things they can control. We believe there are four fundamental principles that can help investors stay on track. Vanguard's LifeStrategy® Model Portfolios embody these principles and have been carefully constructed to give investors of all risk appetites the best chance of investment success.

Goals

Create clear, appropriate investment goals

An appropriate investment goal should be measurable and attainable. Success should not depend upon outsized investment returns, nor upon impractical saving or spending requirements.

Balance

Develop a suitable asset allocation using broadly diversified funds

A sound investment strategy starts with an asset allocation suitable for the portfolio's objective. The allocation should be built upon reasonable expectations for risk and returns, and should use diversified investments to avoid exposure to unnecessary risks.

Costs

Minimise cost

You can't control the markets, but you can control the bite of costs and taxes. The lower your costs, the greater your share of an investment's return. In addition, Vanguard research suggests that lower-cost investments have tended to outperform higher cost alternatives.

Discipline

Maintain perspective and long-term discipline

Investing can provoke strong emotions. In the face of market turmoil, some investors may find themselves making impulsive decisions or, conversely, becoming paralysed, unable to implement an investment strategy or to rebalance a portfolio as needed. Discipline and perspective can help investors remain committed to their long-term plans.

Investment risk information

The value of investments, and the income from them, may fall or rise and investors may get back less than they invested.

Past performance is not a reliable indicator of future results.

Investments in smaller companies may be more volatile than investments in well-established blue chip companies.

Funds investing in fixed interest securities carry the risk of default on repayment and erosion of the capital value of your investment and the level of income may fluctuate. Movements in interest rates are likely to affect the capital value of fixed interest securities. Corporate bonds may provide higher yields but as such may carry greater credit risk increasing the risk of default on repayment and erosion of the capital value of your investment. The level of income may fluctuate and movements in interest rates are likely to affect the capital value of bonds.

The Funds may use derivatives in order to reduce risk or cost and/or generate extra income or growth. The use of derivatives could increase or reduce exposure to underlying assets and result in greater fluctuations of the Fund's net asset value. A derivative is a financial contract whose value is based on the value of a financial asset (such as a share, bond, or currency) or a market index.

Some funds invest in securities which are denominated in different currencies. Movements in currency exchange rates can affect the return of investments.

For further information on the model portfolio risks please see the "Risk Factors" section for the prospectus of the underlying funds on our website at <https://global.vanguard.com>.

Important information

This is directed at professional investors and should not be distributed to, or relied upon by retail investors.

For further information on the investment policies and risks of the model portfolio(s), please refer to the prospectus and KIID of the underlying funds before making any final investment decisions. The KIID for each fund is available, alongside the prospectus via Vanguard's website <https://global.vanguard.com/>

This is designed for use by, and is directed only at persons resident in the UK.

The information contained herein is not to be regarded as an offer to buy or sell or the solicitation of any offer to buy or sell securities in any jurisdiction where such an offer or solicitation is against the law, or to anyone to whom it is unlawful to make such an offer or solicitation, or if the person making the offer or solicitation is not qualified to do so. The information is general in nature and does not constitute legal, tax, or investment advice. Potential investors are urged to consult their professional advisers on the implications of making an investment in, holding or disposing of shares and/or units of, and the receipt of distribution from any investment.

The Manager of the Ireland domiciled funds may determine to terminate any arrangements made for marketing the shares in one or more jurisdictions in accordance with the UCITS Directive, as may be amended from time-to-time.
